

PM-SMCO Permanent Magnetic Chuck

The PM-SMCO high-temperature magnetic chuck can be used permanently at 250°C. It is also possible to equip the magnetic clamping plate with heating elements so that an active heating of the stretched material is possible. PM-SMCO magnetic clamping plates are used to fix vulcanization, thermal bonding tools or sand core molds in machines or devices. Size and design are customized as needed.

max. 250°C
