

Overview

DM 4

plate demagnetizers

Product number 3010 2827

Description

DM plate demagnetizers are high quality, modern devices with 100% duty cycle and a unique system that adapts the field intensity to the size or volume of the workpiece, achieving low standby consumption and high demagnetization quality. DM demagnetizers can also be used as underband or overband units. Workpieces are passed over the pole plates by hand or by conveyor belt. Ground parts can be collected in a non-magnetic container and guided over the pole surfaces.

Product information

Dimension height (mm):	86
Pole face:	281 x 266
Power (W):	350
Weight (kg):	14
ED:	100%
