FXE-MP

Electro-Permanent Lifting Magnet Modules

Product number FXE-MP

Description

FXE-MP electro-permanent lifting magnet modules, in contrast to the FXE-M modules, do not work with square pole technology but in sandwich construction, which enables particularly narrow and low-interference contour magnet shapes. FXE-MP modules are especially suitable for gripping small components from fixtures. The magnet modules can be controlled via the MCF control unit. FXE-MP modules have proven themselves thousands of times in use on cranes, manipulators, robots and conveyor systems.
