

## Overview

---

# KMF 600

## Magnete für Geländereinigung

Product number 3004 600

## Description

---

KMF magnetic sweepers are used to collect chips, nails, stampings and other ferromagnetic small parts which are usually difficult to sweep or vacuum up. The permanent magnet system with an extremely deep magnetic field is located in a mobile, stable housing made of stainless steel sheet. The wheels are not located on the side but behind the housing, i.e. corners can be completely swept out. The height-adjustable wheels can also be adapted to an uneven terrain. All housing parts are made of stainless steel, the machine is maintenance-free and also suitable for outdoor work. The magnetic field is switched off via the foot lever and the collected parts fall downwards out of the device. These devices are often used in metal processing plants, on construction sites and in the recycling sector.
